

## Manhattanville College- Reference Guide for Handling a Hurricane

- Find a location away from windows and doors. Injury from shattered glass presents a real threat to your safety.
- Seek shelter in a bathroom, basement or interior hallway.
- Cover yourself with a blanket to prevent any injuries from flying glass.

- Do *not* go outside, even if the weather appears to calm. You could be in the "eye," or middle of the hurricane, where winds quell and rain subsides.
- Wait for instructions from the Campus Safety Department or rescue personnel.
